

High Performance Low-Code

The OutSystems platform combines the radical productivity of low-code with the essential capabilities required for building strategic, mission-critical apps

Accelerate your velocity to relieve the stress on your organization

The need to build custom apps is growing faster than companies' capacity to build those apps. The pressure to move legacy apps to the cloud is growing even faster. What's the one thing growing the fastest? It's the backlog of apps required to deliver what the business needs to get and stay ahead.

OutSystems helps your organization move past those backlogs and accelerate the velocity of your business. The OutSystems platform will help you turn app development into a strategic strength for your business. Applying the trio of model-driven development methods, AI-powered DevOps automation, and a cloud-native platform—enables your business to overcome challenges caused by trying to grow rapidly.

Combining OutSystems with Amazon Web Services (AWS) enables organizations to build and deploy applications rapidly with confidence.

Why OutSystems over run-of-the-mill Low-Code and traditional development?

- **Power:** The freedom to innovate and deliver—no matter the complexity
- **Agility:** Peace of mind that your apps will evolve at the speed of your business
- **Security:** Trust your most important assets are safe, from development through to production
- **Scale:** Confidence that the experiences you build will handle whatever the world throws at them

OutSystems powered by AWS

- OutSystems cloud services run on AWS and natively leverage key AWS services, including Amazon Elastic Compute Cloud (Amazon EC2), AWS Lambda, and Amazon Simple Storage Service (Amazon S3)
- Confidently handle sensitive customer data on the AWS Cloud, built with the highest standards for privacy and data security
- Use AWS to automate time-consuming manual business processes and security tasks in a secure cloud environment

Improve software development agility and spend more time innovating, not debugging

- Build, deploy, and update applications fast
- AutoScale seamlessly, rapidly, and regionally as needed on AWS
- Reduce costs using flexible AWS services
- No lock-in: Compliant with open industry standards

A leader in the Gartner 2023 Magic Quadrant™ for Enterprise Low-Code Applications Platforms for the last six years

A leader in the 2021 Forrester Wave™: Low Code Development Platforms for Professional Developers

Industry-leading businesses trust OutSystems to build the strategic apps that deliver competitive differentiation

"OutSystems provides the innovation and agility to accelerate the digital transformation of Western Union. In just 11 months, we delivered a full-service digital banking experience that expands our relationship with customers."

Tom Mazzaferro, Chief Data and Innovation Officer, Western Union

Whatever industry you're in, you'll be in good company with OutSystems

Pharma	Only Four Months to Overhaul Pharmaceutical R&D Platform Takeda used OutSystems to rebuild its outsourced compound synthesis solution. The new application was built in just four months and has improved collaboration, efficiency, transparency, and compliance.	
Banking	Launched New Digital Banking Experience Quickly in 11 Months Using OutSystems for customer-facing digital experiences, back office, and workflow solutions, Western Union launched new digital banking services in two countries in just 11 months .	
Healthcare	Built a Medical Test Site Management System in One Month "A platform approach to app dev makes the impossible possible. Delivering four times faster while at the same time improving quality is a game-changer—making a vast range of innovations viable that were previously risk or cost-prohibitive." – Bruce Buttles , Digital Channels Director	
Manufacturing	Easy integration consolidates data and speeds product launches The Product Launch Application Center—using OutSystems—plays an integral role in getting new products to market by tracking the product design process from beginning to end.
