

# The low-code platform for GenAI innovation

The OutSystems platform can help you quickly build GenAI solutions for all areas of your company —without risk, and without GenAI expertise.

“We want to have our own access to generative AI, aka GPT platforms, and we did this with an OutSystems-powered solution.”

Walter Nirschl, Head of Global Workplace Services

“As a company with a small IT department, OutSystems GenAI features help us accelerate development while minimizing security vulnerabilities.”

David Lloyd, Director of IT, Park Industries

## OutSystems uses OutSystems to build GenAI applications

**59.1%**

of support questions answered by GenAI.

**28.5%**

improvement in data quality thanks to GenAI population of fields.

**81%**

increase in target audience thanks to GenAI content translation.

## With OutSystems you can

### Drive real business value with GenAI

Easily build custom apps based on your own internal data for the most powerful experience.

### Reap the rewards of GenAI without the risk

With OutSystems, you get a platform that generates safe, quality code that doesn't degrade into tech debt, and automated security checks and global compliance come standards.

### Combine GenAI insight in one platform

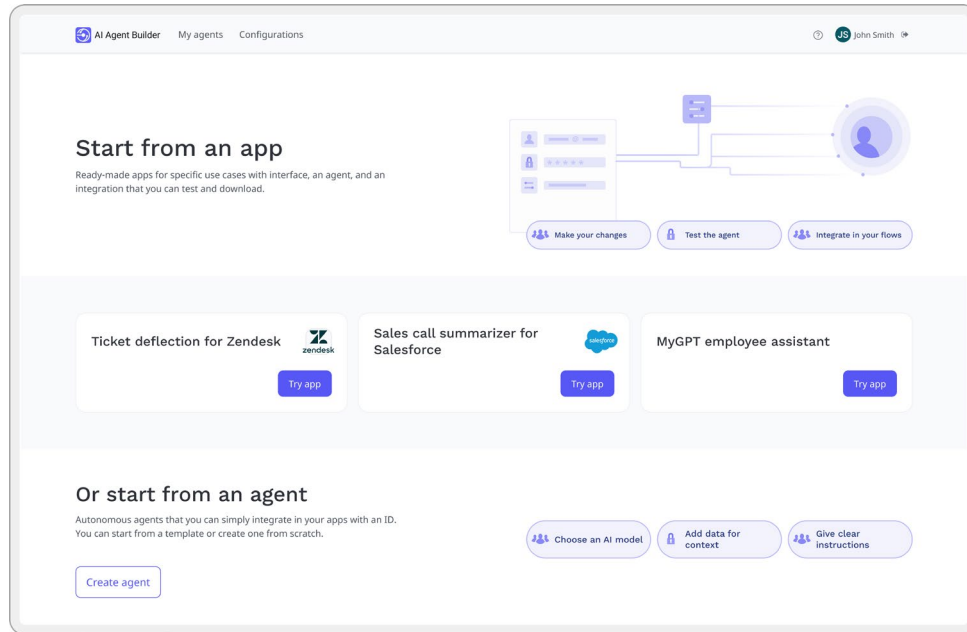

A unified platform for all of your GenAI apps gives you the most holistic view of your data, so you can get the best insight for your business, managing apps from ideation to delivery.

### Deliver GenAI value without GenAI expertise

Easily create reusable GenAI agents, leverage ready-to-go app templates, and use low-code to combine the power of LLMs, RAG, and proprietary knowledge sources without complex development.

# Why choose OutSystems for GenAI innovation

## Tools to build AI-embedded apps

- Makes it easy to build apps that use GenAI—no AI expertise required.
- Offers a library of quick-start apps and ready-to-use agent templates to help you ramp up fast.
- Provides built-in guardrails to ensure security and governance, and to standardize AI deployment across the business.

## GenAI coding assistance

- Responds to natural-language prompts for data querying.
- Helps you code better with AI-driven code completion.
- Makes it possible to deliver more quickly with next-best action suggestions.

## AI-optimized SDLC

- Automatically reviews code to ensure it meets critical architectural standards.
- Monitors your entire application portfolio to identify and remove technical debt.
- Identifies performance bottlenecks, such as unlimited records in SQL queries.
- Alerts you to security vulnerabilities, such as SQL injection.

## With the platform you need to manage it all

- Cloud-native infrastructure and tools for developing, testing, deploying, and running applications.
- Guardrails for adherence to global security and compliance standards.
- DevOps, CI/CD, and tech debt monitoring tools for easy maintenance at scale.
