

Centralised, Secure, and Scalable Doc Management.

About JS DocHub.

JS DocHub is a comprehensive document management solution designed to accelerate the interaction between your systems and leading cloud storage providers, such as Azure Blob Storage, AWS S3, and many more.

It provides an **optimised framework** that simplifies the integration and management of document storage solutions, ensuring **rapid deployment** and **minimal setup time**.

Benefits.

Improved Organisation and Accessibility.

Centralised, accessible storage enhances efficiency, productivity.

Enhanced Collaboration and Productivity.

Simultaneous collaboration, better teamwork, faster completion.

Increased Security and Compliance.

Robust security and regulatory compliance ensured.

Natively built with and on top of **OutSystems 11, ODC** and **Mendix**, enabling native platform interoperability, smooth workflows, simplicity, and operational efficiency.

Enhanced Efficiency.

Accelerates Document Retrieval.

Provides quick and easy access to documents, significantly cutting down retrieval times.

Simplifies Document Management.

Streamlines the processes of organising, managing, and updating documents, reducing administrative overhead.

Optimises Workflow.

Enhances overall productivity by integrating document management into existing systems and workflows seamlessly.

Transform your document processes with quick access, simplified management, and integrated efficiency.

Problems Solved.

Fragmented Document Storage.

Consolidate documents into a unified platform for efficient management.

Scalability Issues.

Easily scale to handle growing volumes of documents without performance issues.

Security Concerns.

Ensure robust protection of sensitive information against unauthorised access.

Integration Difficulties.

Seamlessly integrate with existing systems for streamlined workflows.

Main Features.

- Role-Based Access Control (RBAC)
- Document Templates
- Customise Templates
- Tagging and Categorisation
- Cloud Storage Integration
- User-friendly Interface
- Document Indexing
- Metadata Extraction
- Version Control
- Encryption
- Search Capabilities
- Responsive Design
