QA Empowered  
AN OUTSYSTEMS' CHOICE

TestFramework is a tool recommended by OutSystems, focused on helping teams easily automate any tests, run them, monitor, and report the results.

TestFramework has proved useful for our clients, decreasing their product's time-to-market and project costs, and reducing the project's development, bug-fixing and testing cycles.

With TestFramework, project managers can track the code coverage and get detailed and daily reports of coverage and failed vs. passed tests.

testimonial

“ We decided to try TestFramework as it was recommended by OutSystems and Indigo and we are glad we did it. It integrated perfectly with the Unit Test framework in use in our R&D and provided us with immediate up to date information regarding current status and evolution for the regression test statistics, as well as detailed per module information.

Diogo Nesbitt  
OutSystems Architect

CODE COVERAGE

Keep track of your code coverage.

DETAILED REPORTS

Receive up-to-date reports of test runs and code coverage.

INCREASE PRODUCTIVITY

Faster time-to-market and cost reduction with issues found earlier.

ZERO TRAINING

TestFramework was designed for everyone. No technical background necessary.

ALL-IN-ONE

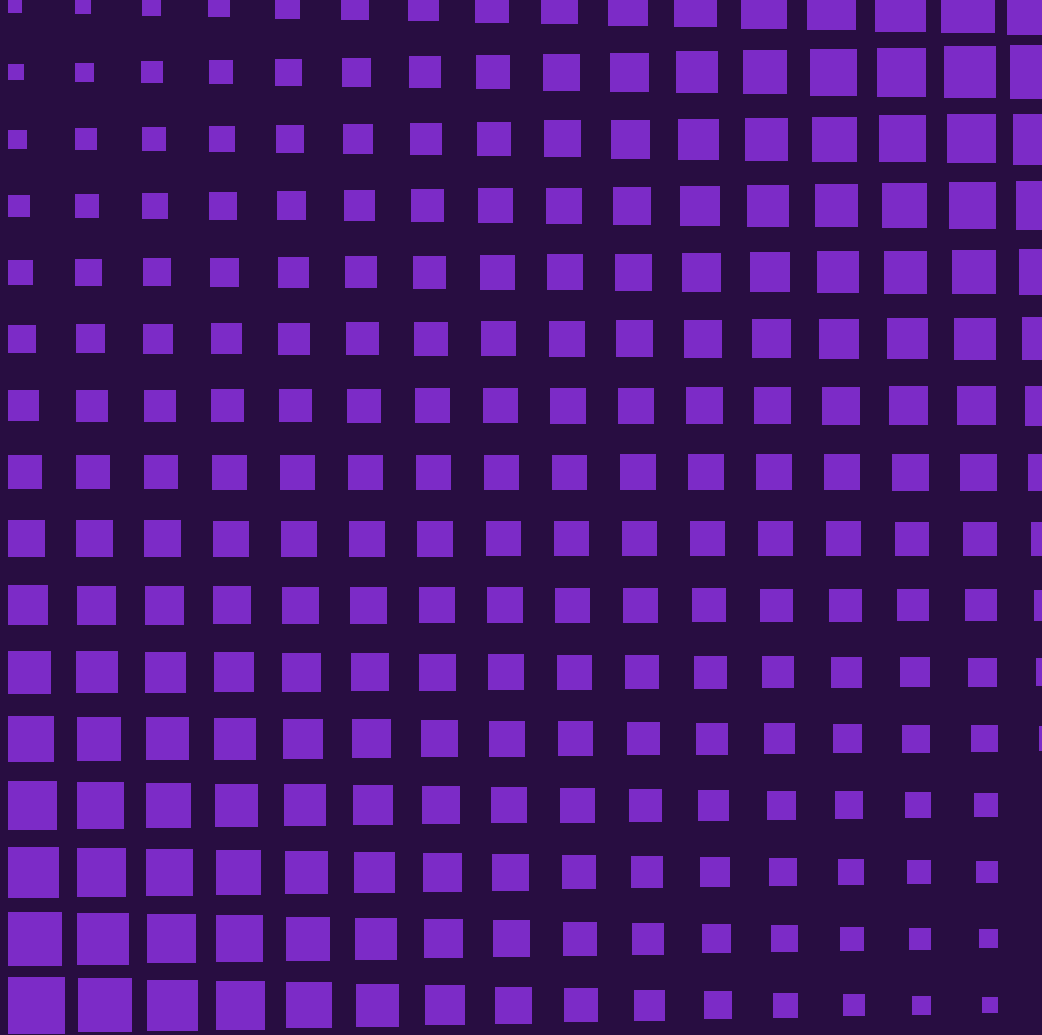

Centralize your different types of tests in one place.

ONE TEST SUITE FITS ALL

Run or schedule your tests in different environments.
