

Phoenix Field Services

Empowering Digital Field Services Operations

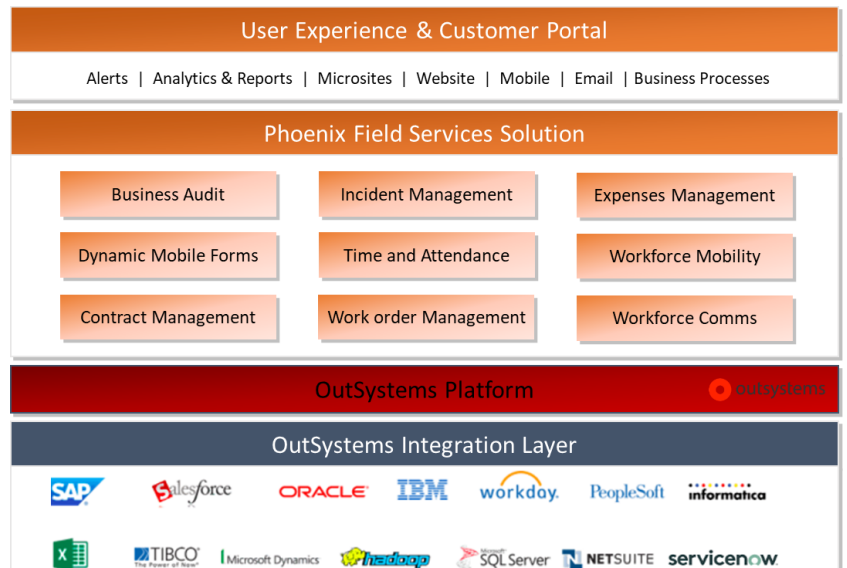

We deliver your tailored Field Services Application faster than you can evaluate the 150 bespoke packages out there

About this Application

The Dynamic Mobile Forms application is an alternative to other field services applications used to empower your workers in the field. Combined with the web platform of OutSystems, it collects consistent data, standardise operations, send reports, and dynamically create forms for any type of use in the organization. Instantly access the most up-to-date forms from any location. Access inspection forms on any smartphone device or tablet (iOS and Android). After a form is complete, an instant shareable report is generated.

Contact us and discover all other Phoenix Field Services applications and modules.

Main Features

This application supports the creation of dynamic forms in mobile device, without needing IT intervention, and can be integrated with other business processes in field services.

- Create templates dynamically that can have multiple field types: Text, dates, labels, attachments, multiple field questions, etc).
- Templates versioning;
- Sort and order questions;
- Questions preview;
- Clone templates;
- Questions that are linked to business rules of the platform;
- Create PDF automatically with output of form;
- Mobile template answers preview and submit to server.

Outcomes

Go Paperless!!! Read some customers outcomes met by Dynamic Mobile Forms powered by OutSystems.

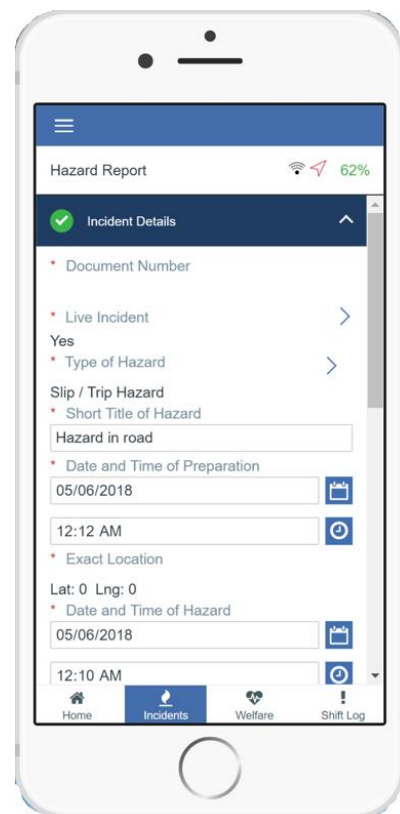

Faster app development and deployment makes operations teams more productive

Reduce Incidents, centralize data and meet compliance goals

Increased operations control and faster resolution

The OutSystems low-code platform allows us to be very nimble. It lets us rapidly tailor our technology-infused operations to our clients' specific needs. And that's the source of our magic.

Ying Loong Lee, Technology Director, Certis Australia
