INTELLIGENT AUTOMATION

Get more from your business process automation efforts

70% of digital transformations fall short[1]

By digitizing your paper-based forms and automating some manual processes you achieved some initial efficiencies. But now you're finding it harder to drive additional gains. Maybe the processes themselves were flawed. And all automating did was get you to a bad result faster. Maybe the problems fixed in one area exposed larger gaps in other areas. In many cases, driving more productivity was harder because employees just didn't have access to the data they needed, when they needed it. And they had a hard time changing what they had just automated when their business needs changed.

In order for business process automation to be successful, it must be done intelligently. And it's not just about using intelligent tools and software like artificial intelligence, machine learning, or Robotic Process Automation (RPA). It's also about taking an intelligent approach - a holistic, people-first approach to process management, with easy access to data, and continuous improvement over time.

[1] Flipping the odds of digital transformation success, BCG, 29 Oct 2020

Intelligently automate your core business processes for greater productivity, efficiency, agility, and speed.

Improve productivity

Get up to 70% greater productivity. Do with 3 people what used to take 10.

Save time

Spend up to 90% less time. Do in half an hour what used to take 5 hours.

Respond faster

Respond up to 5X faster. Do in 1 day what used to take 5.

Develop faster

Build up to 3X faster. Develop and deploy custom applications in 3 weeks vs. 9.

outsystems

Intelligently automate your core business processes with OutSystems and re-energize your digital transformation. Get more out of your process mining and RPA investments. The OutSystems platform helps you rapidly assemble custom applications that improve employee oversight and orchestration of your automated processes. Easily provide them and your automated applications with access to the systems and data needed. And quickly adapt your processes and applications as your business needs change.

OutSystems offers best-in-class UX/UI templates for improved human computer interaction, rapid integration to third-party databases and systems of record, and agile change management - all without sacrificing enterprise security and governance.

▦	**100+ responsive visual components**	Web and mobile templates, patterns, design kits, and plugins reflecting UX/UI industry best practices, accelerate the implementation of highly intuitive interfaces, providing your employees with greater end-to-end process visibility and control.
⤴	**400+ pre-built connectors**	Pre-built connectors to the most common apps and SaaS solutions, helps quickly link your applications to your systems of record for faster and more efficient data retrieval.
◌	**Comprehensive lifecycle management platform**	The platform's unified LifeTime console, together with its TrueChange application dependency manager and Architecture Dashboard's technical debt heat map, facilitate more agile, iterative change management.
☁	**Support for AWS services**	A comprehensive library of pre-built, pre-tested, production-ready AWS services connectors helps accelerate application assembly and reduce risk.

Drive greater productivity, efficiency, and agility, by intelligently automating your core business processes with OutSystems. Learn more about the OutSystems platform and how you can start your free trial.
