

# Efficient, Accurate, and Consistent Doc Generation.

# Efficient, Accurate, and Consistent Doc Generation.

# About JS DocGen.

**JS DocGen** is a comprehensive document generation solution designed to transform the way documents are created by automating the generation process with pre-defined templates.

This innovative solution eliminates the time-consuming and error-prone nature of manual document creation, ensuring that every document is **accurate, consistent, and professionally formatted.**

# Benefits.

## Improved Time and Cost Efficiency.

Automate document creation processes, reducing the time spent on manual tasks.

## Increased Consistency and Accuracy.

Ensure that every document generated adheres to standardised templates.

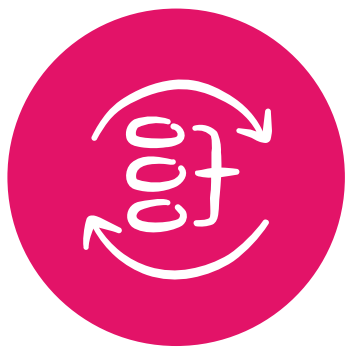

## Enhanced Productivity.

Free up resources by automating repetitive document creation tasks.

Natively built with and on top of **OutSystems 11, ODC** and **Mendix**, enabling native platform interoperability, smooth workflows, simplicity, and operational efficiency.

# Enhanced Efficiency.

## **Automated Processes.**

Significantly reduce the time spent on creating documents by automating the entire process.

## **Error Reduction.**

Minimise the risk of errors by using standardised, pre-defined templates.

## **Scalability.**

Easily manage the creation of large volumes of documents without compromising on quality or speed.

**Effortlessly generate accurate professionally formatted documents with automated, scalable, and error-free processes, saving you time and cost.**

# Problems Solved.

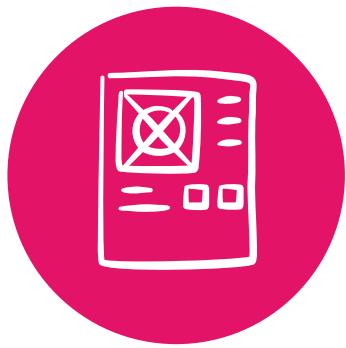

## **Manual Document Creation.**

Eliminate the time-consuming and error-prone process of creating documents manually.

## **Inconsistent Document Quality.**

Maintain uniformity and professionalism in all generated documents through standardised templates.

## **Complex Template Management.**

Simplify the management and updating of document templates, reducing administrative overhead.

## **Integration Challenges.**

Overcome difficulties in integrating document generation capabilities into existing systems with seamless compatibility.

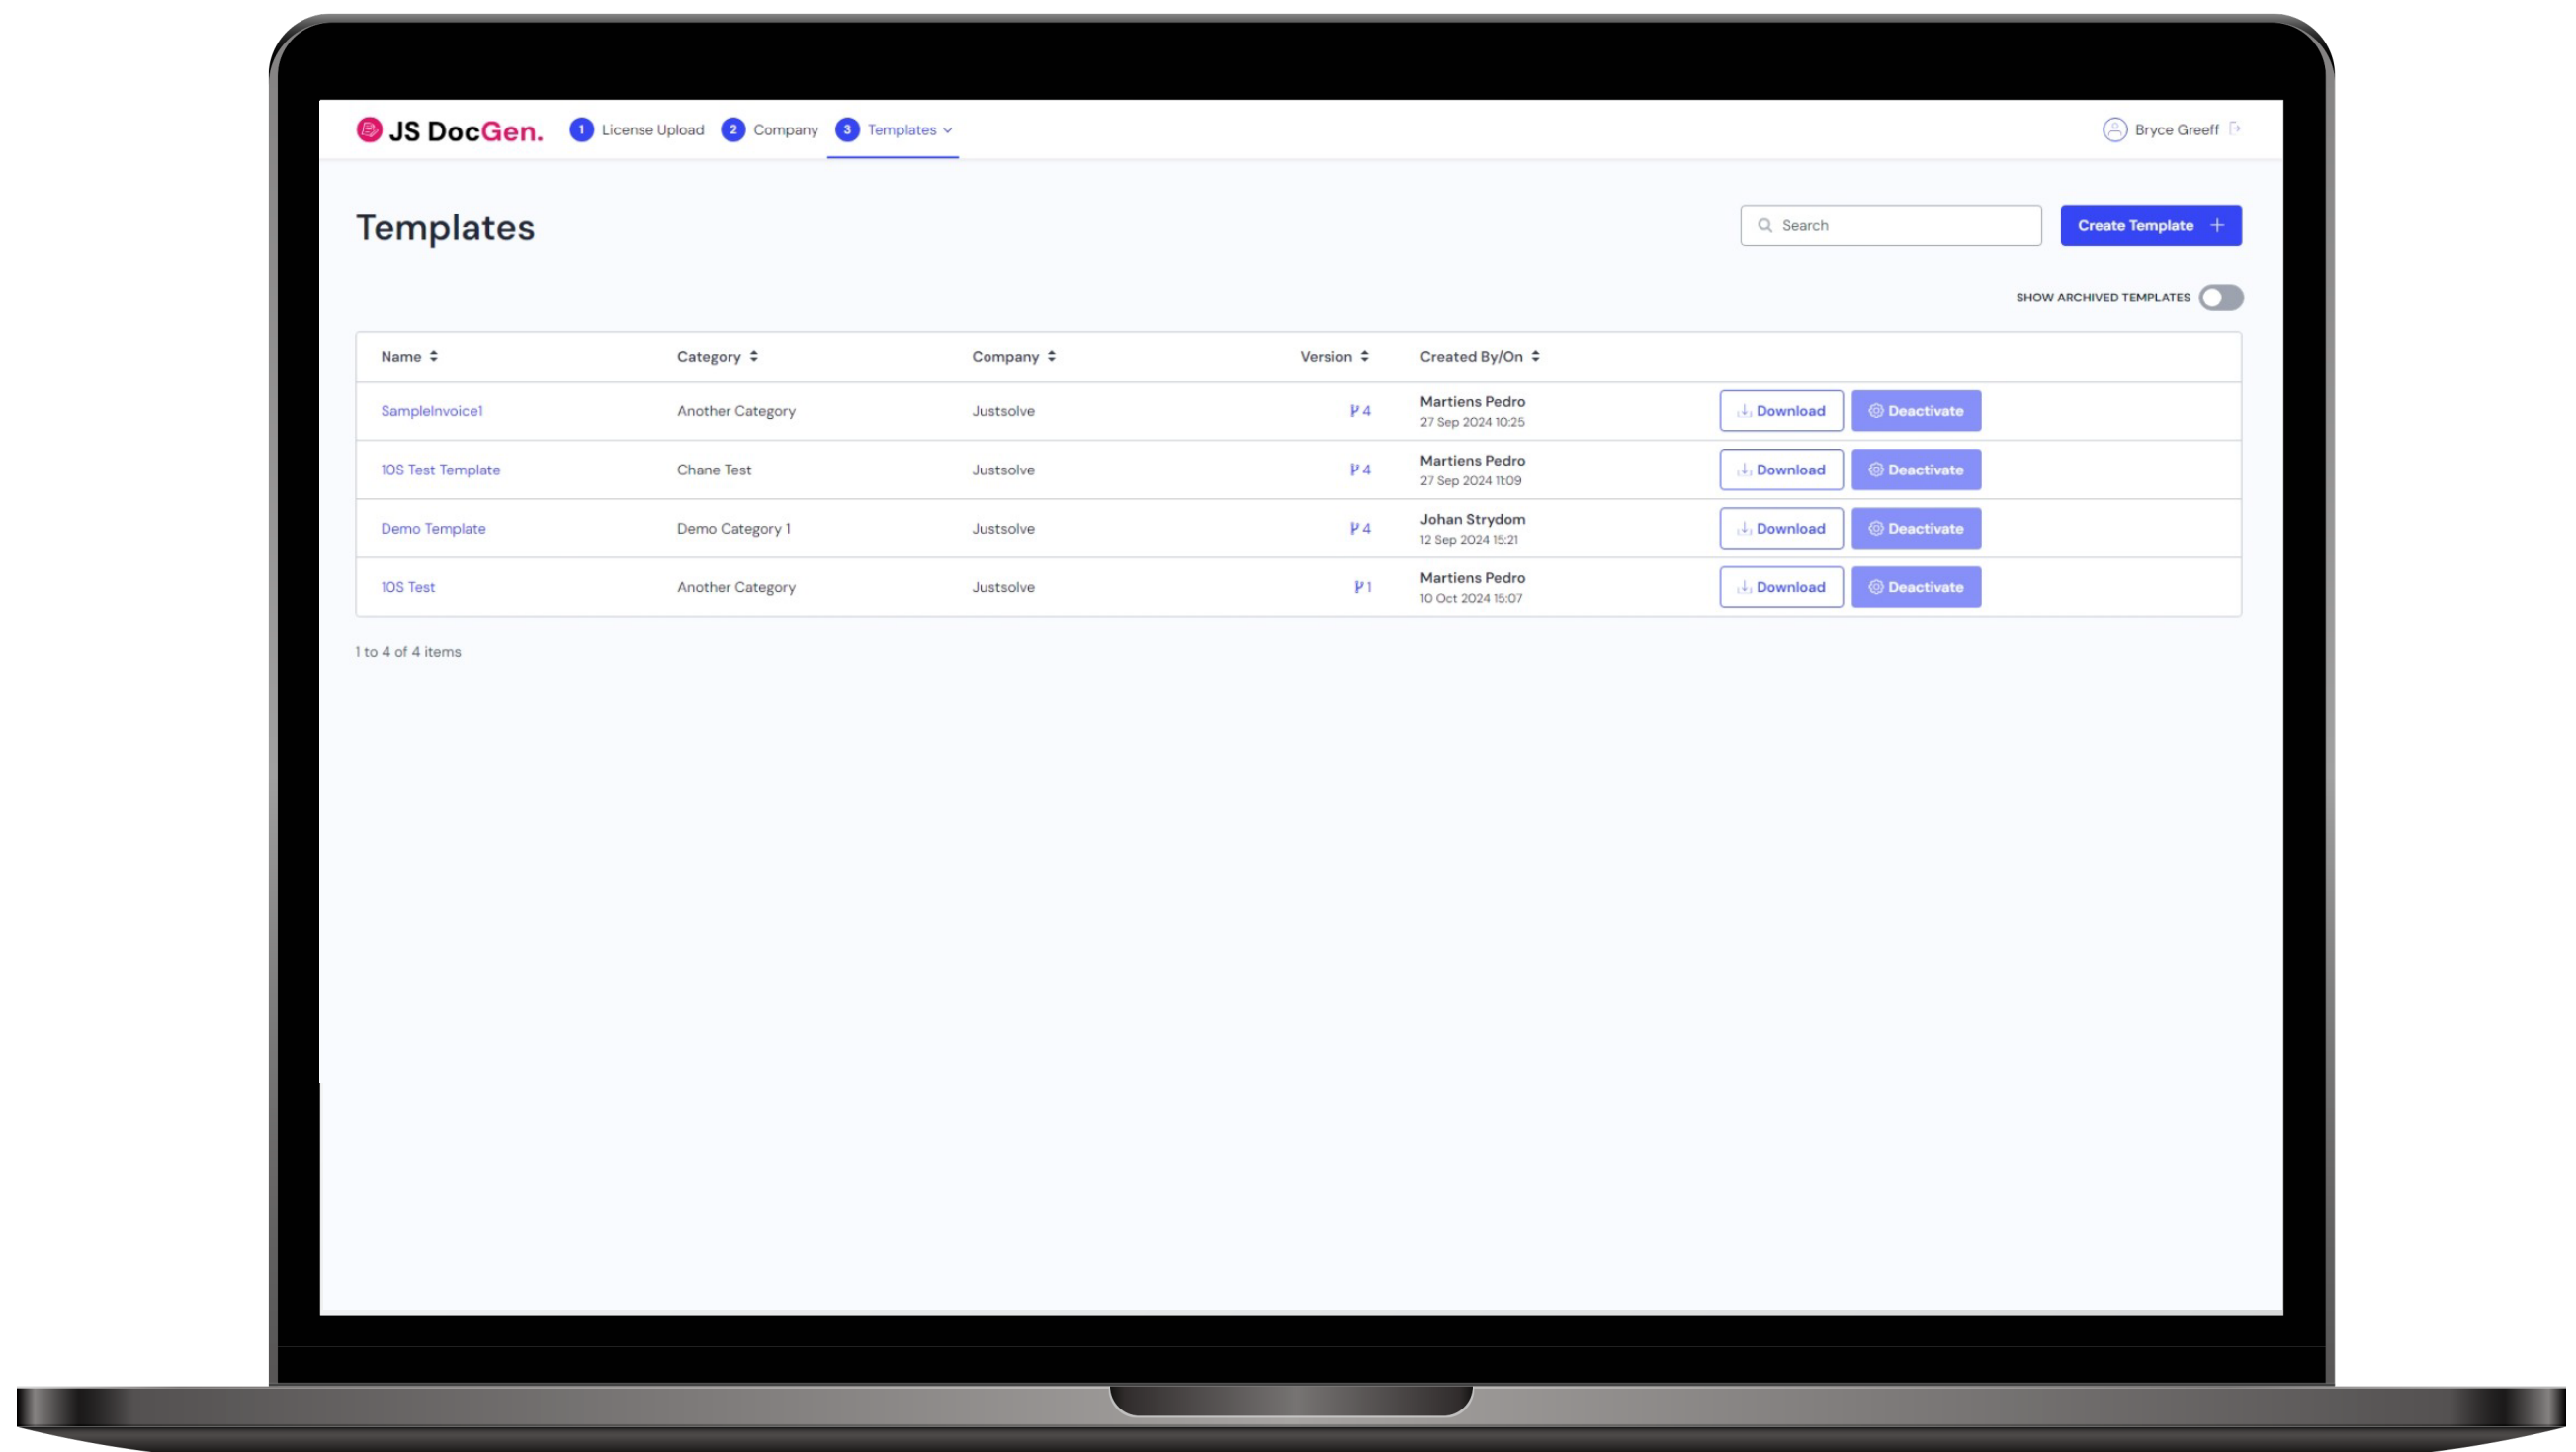

# Main Features.

- Role-Based Access Control (RBAC)
- Document Templates
- Customise Templates
- APIs for Automation
- OutSystems Integration
- User-friendly Interface
- Document Indexing
- Metadata Extraction
- Version Control
- Encryption
- Search Capabilities
- Scalability
