

COMPLETE OVERVIEW

A high performance, frameworkagnostic JavaScript data grid component with rich features like editing, filtering, grouping, virtual rendering, tree views and export, handling large datasets smoothly.

QUICK OVERVIEW

Include in your OutSystems a feature-rich JavaScript grid for fast, large-scale data handling.

Boost your OutSystems productivity with Bryntum GRID: a blazing-fast, feature-packed JavaScript grid offering seamless editing, filtering, grouping, virtual rendering, and effortless handling of massive datasets.

KEY FEATURES

Uddan and Bryntum bring you Grid to:

- Create blazing-fast performance that handles large datasets smoothly with minimal lag.
- Enable powerful editing and filtering let users update, sort, and refine data instantly.
- Deliver flexible grouping and tree views organize complex data, making it easy to navigate.

KEY BENEFITS

Grid allows you to:

- Boost productivity by handling large datasets quickly and efficiently.
- Improve data accuracy with intuitive editing and powerful filtering tools.
- Simplify complex data management through flexible grouping and tree views.
