

Simplifying Transformation, Accelerating Success

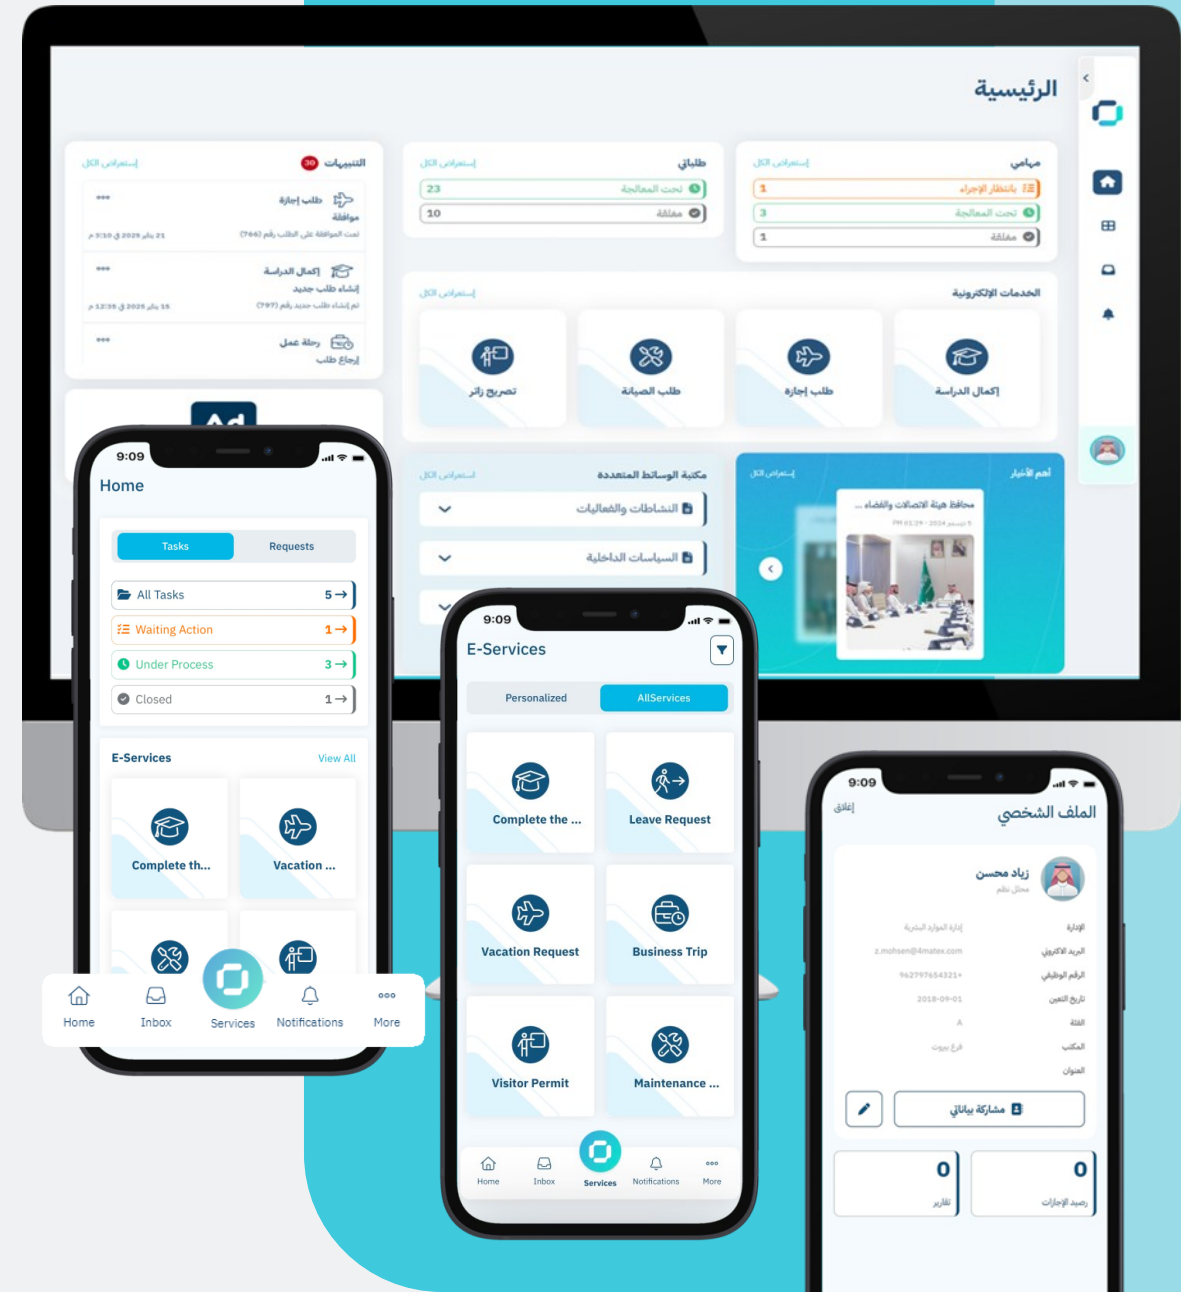

Digital Transformation with Low Code OutSystems Accelerator

OutSystems Accelerator

All-in-one solution designed to revolutionize processes and streamline organizational workflows. Empowers governments and enterprises to accelerate their digital transformation journey, achieve operational excellence, and unleash the power of intelligent automation.

- Employee Workspace
- Consolidated Tasks Inbox
- Unified Multi-channel Notification
- Dynamic Workflow Engine
- SLA and KPI Monitoring
- BackOffice
- Customizable Dashboards
- Real-Time Data Sync

Main Components

I

Employee Workspace

Built with employees in mind, providing a user-friendly interface and tools to simplify daily workflows. Seamlessly access the platform on both portal and mobile devices, offering flexibility and connectivity for employees wherever they are.

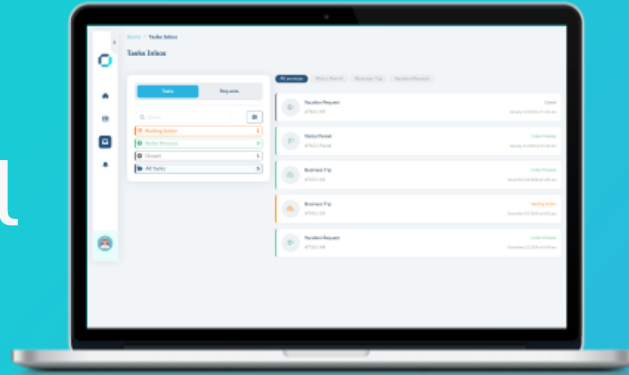

II

Consolidated Tasks Inbox

A unified task management feature that aggregates tasks and pending actions into a single, organized view. This enables employees to efficiently prioritize and complete their responsibilities, reducing delays and enhancing productivity by ensuring nothing is overlooked.

III

Unified Multi-channel Notification

Consolidates instant alerts for approvals from various applications, updates, deadlines into a single view.

Cross-channel Delivery

Customizable Alerts

Real-time Updates

Integration with Existing Systems

IV

Dynamic Workflow Engine

Allow for real-time adjustments and modifications based on business rules configuration.

Flexibility

Easily adapt to changing conditions and rules in real-time

Support Parallel activity

Support two or more sequences that execute at the same time

Adaptability

Handle complex workflows with multiple conditions

Scalability

Efficiently scale to accommodate growing volumes and complexity

Versioning Support

Provide new versions of existing workflows, and ensures safe editing of existing workflows

Reusability

Rules, workflows, and notifications can be reused extensively

V

Dynamic Forms

Enhance flexibility and customization of data collection and management processes within applications. These forms allow users to interact with various data entities, such as employee information, job roles, or benefits, and customize form fields dynamically based on specific conditions or rules.

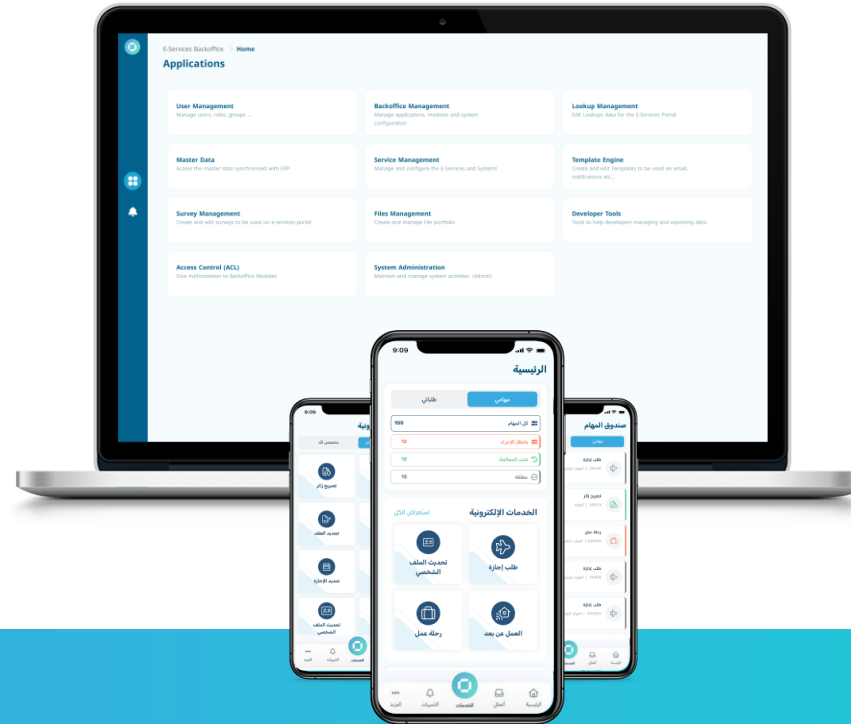

Dynamic Field Generation

Dynamic Dropdowns

Conditional Logic

Data Entity Integration

Field Validation

VI

BackOffice

A Backoffice for Services moderators and administrative teams with the tools to efficiently manage employee data, streamline processes, and maintain security, helping organizations offer better services to their employees and ensure operational effectiveness.

Master Data Management

Lookup Configuration

Access Control & Security

User Management

Notifications Configuration

VII

Real-Time Data Sync

Data entered in dynamic forms can be instantly updated in backend systems, ensuring that all information remains current without requiring manual updates.

VIII

Customizable Dashboards

Empower users with personalized dashboards that provide real-time insights and a comprehensive view of key metrics. Tailored to individual roles and preferences, these dashboards enhance decision-making, improve visibility, and streamline access to critical information.

IX

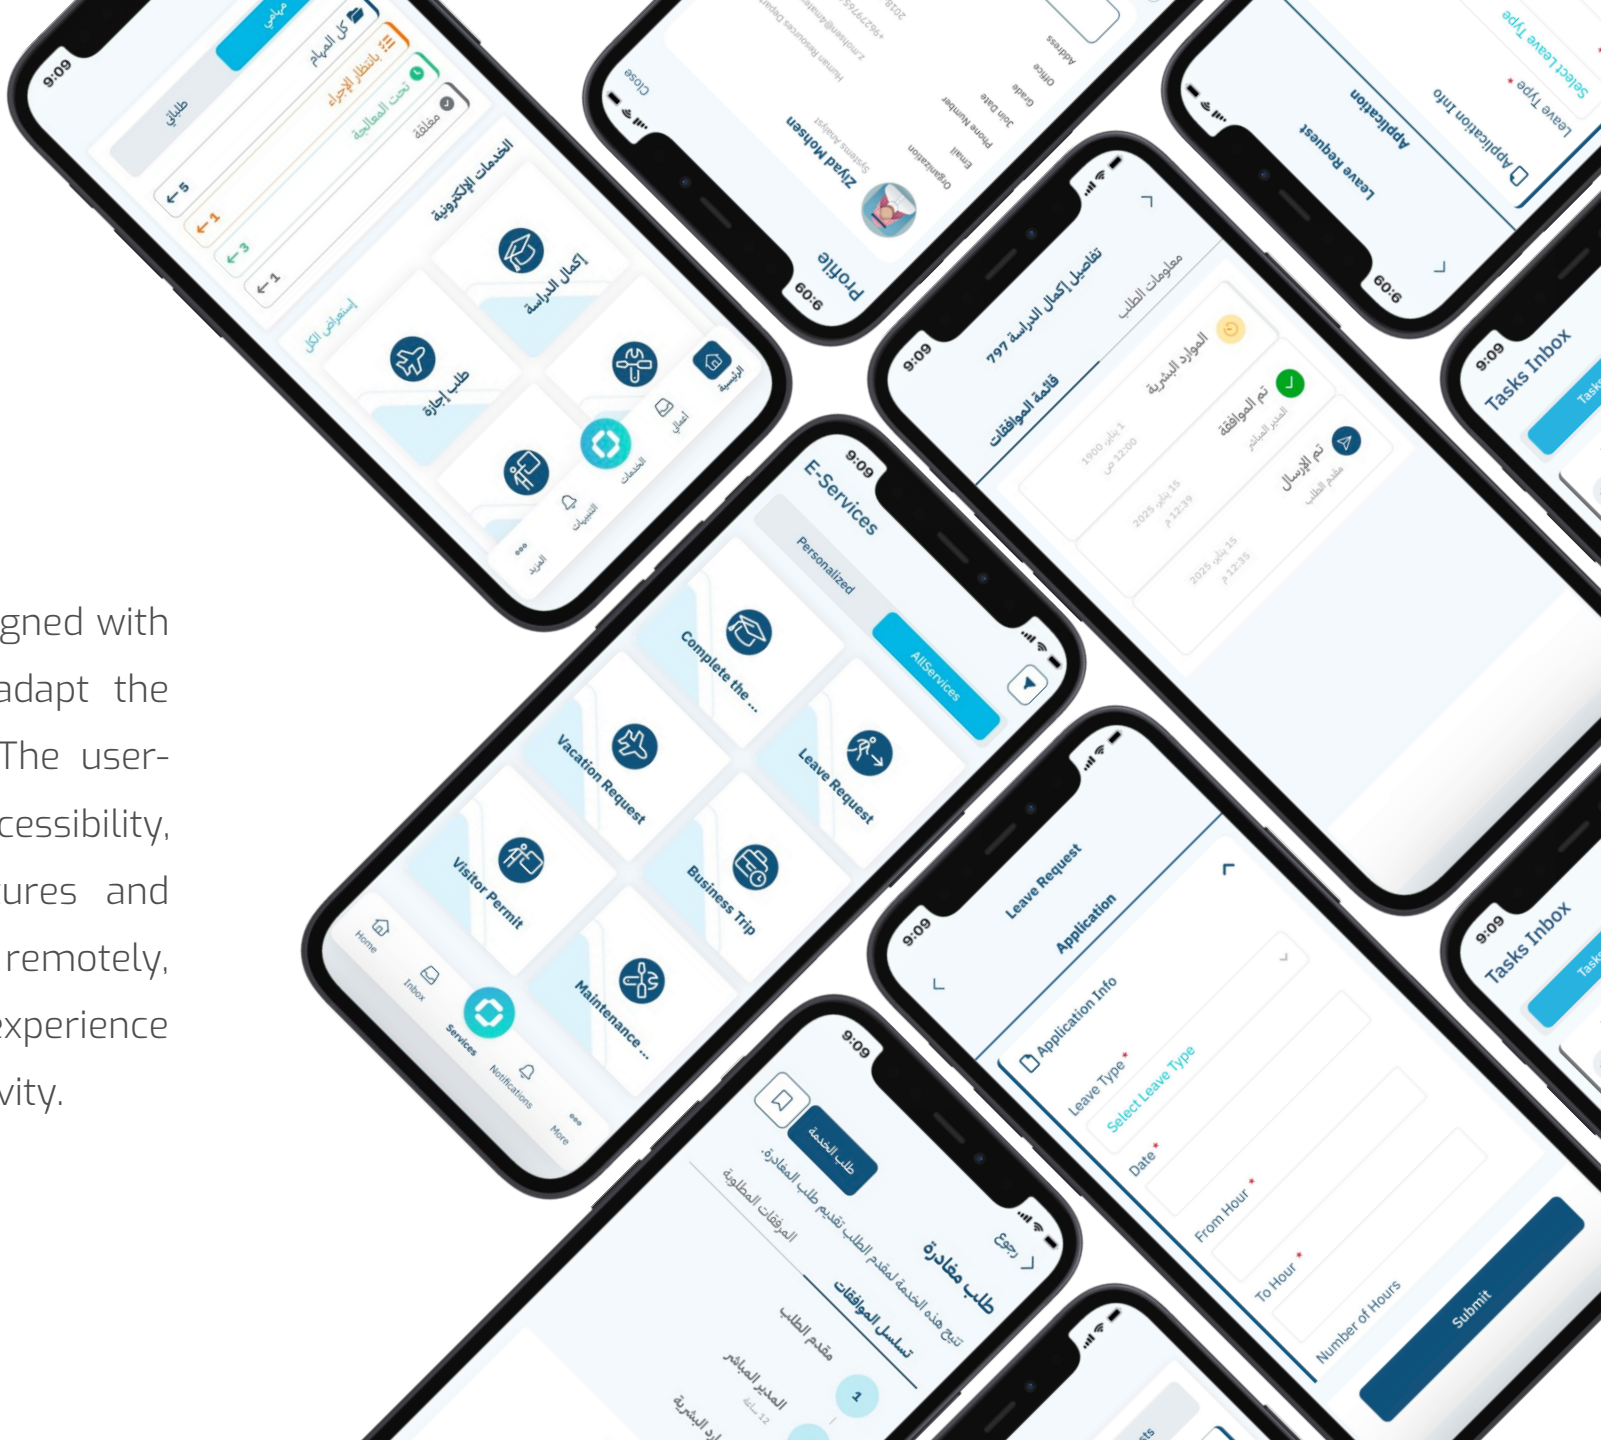

SLA and KPI Monitoring

Track service-level agreements and key performance indicators through built-in monitoring tools, ensuring operational excellence.

UX Design

Our solution includes a customizable theme designed with UX best practices, allowing organizations to adapt the interface to match their branding and needs. The user-friendly layout ensures easy navigation and accessibility, enabling users to intuitively access key features and services. Whether in the office or working remotely, employees benefit from a seamless, tailored experience that enhances both usability and overall productivity.

Integrations

In addition to Oracle EBS and Fusion, our solution is designed to integrate seamlessly with existing enterprise applications. Whether it's HR systems, financial software, or other critical tools, we ensure smooth connectivity and data exchange to allow organizations to maintain their current technology stack while enhancing user experience and workflows with a unified, user-friendly interface.

Compliance

Our solution is engineered to meet the highest standards of compliance and regulatory requirements. Extends to ensuring full adherence to cybersecurity frameworks and other regulations such as GDPR, NCA, and SAMA, guaranteeing secure, efficient, and legally compliant solutions for our clients.

Enterprise Platform for Intelligent Automation

The solution is built on a unified digital foundation that combines workflows, data, tasks, notifications, and enterprise integrations within a single platform. This architecture creates the ideal environment for organizations to adopt Artificial Intelligence and Agentic AI capabilities securely and at scale.

Rather than implementing AI as isolated tools, organizations can embed intelligent capabilities directly into business processes, enabling systems to understand context, make recommendations, automate decisions, and orchestrate actions across multiple applications and departments.

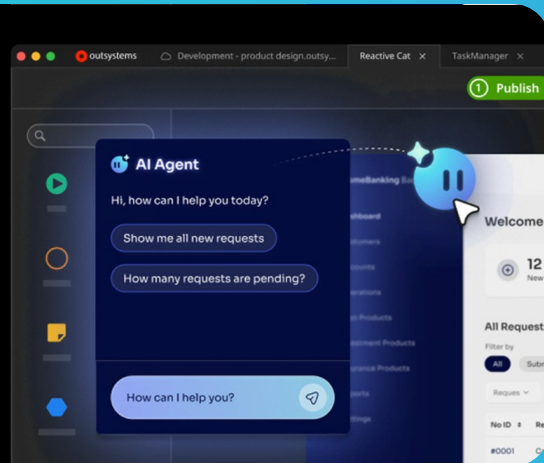

AI & Agentic AI Use Cases

By combining enterprise workflows, real-time data, and intelligent automation, the Accelerator enables AI and Agentic AI to support employees, optimize operations, and deliver smarter, faster, and more responsive services.

Build your agentic future

Your AI Development Platform.

Unified.
Agile.
Enterprise-Proven.

1

Smart Task Prioritization

Outcome: Urgent work is done first.

2

Task Summarization

Outcome: Faster decisions.

3

Intelligent Approval Assistant

Outcome: Faster approvals with better governance.

4

Predictive SLA Management

Outcome: Better operational performance and less delayed tasks.

5

Intelligent Workflow Builder

Outcome: New workflows are ready in hours instead of weeks.

6

Smart Task Delegation

Outcome: Improved workload distribution and reduced task delays.

Benefits of Implementation

Streamline processes, improve data management, enhance user experience, and ensure compliance. Its ability to dynamically adjust forms, automate workflows, and integrate with existing systems makes it a versatile tool that significantly boosts operational efficiency, reduces costs, and enhances both employee and administrator satisfaction.

4matex Strategic Partnership with OutSystems

As a recognized partner of OutSystems, Our partnership reflects our dedication to staying at the forefront of low-code technology and empowering businesses through digital transformation.

Our team of OutSystems-certified professionals brings a wealth of expertise to every project, ensuring the successful implementation of tailored solutions. With more than **100 certifications** across key domains, our team is equipped to handle diverse business challenges and deliver exceptional results.

	Associate Developer (ODC)		Web Developer Specialist (O11)
	Web Developer Specialist (ODC)		Tech Lead (O11)
	Mobile Developer Specialist (O11, ODC)		Architecture Specialist (O11)
	Front-end Developer Specialist (O11, ODC)		DevOps (O11)
	Security Specialist (O11 and ODC)		Expert Traditional Web Developer (O11)
	Agentic AI Specialist (ODC)		Professional Traditional Web Developer (O11)
	Associate Developer (O11)		Associate Traditional Web Developer (O11)

Customer Reviews

Based on 4 Reviews

4.8 ★★★★★

Our clients consistently recognize the value of our OutSystems-driven solutions, awarding us a high rating for excellence in delivery, innovation, and impact. Their feedback highlights our ability reduce time-to-market and deliver measurable business outcomes.
