

STEDIN | Developing applications at the speed of light

Grid operator Stedin has set itself the ambitious goal of transitioning all households to sustainable energy. To achieve this goal, the Stedin IT department made the transition from a traditional waterfall development method to an agile approach. For this switch, the company used the low-code development platform OutSystems and asked CoolProfs to take on the role as an implementation partner and help them.

Stedin was immediately enthusiastic with the possibilities OutSystems brought to the organisation, says Martijn van Ierland, Team Lead and Release Train Engineer at Stedin. “When OutSystems 10 was released, with the possibility to develop mobile applications as a new feature, Stedin jumped onboard as one of the first companies to build native apps. We have already created two mobile apps that are used by 800 colleagues. “As an example, one application for work preparation was created with a link to the SAP order system. Another was a mobile app with asset information for employees on site. OutSystems partner CoolProfs helped Stedin set up the infrastructure and configurations, define the IT architecture and build the first applications for and with Stedin. As a result, the network operator quickly gained a great deal of expertise and immediately reaped the benefits from working with OutSystems and CoolProfs. ●

SAMSKIP | Samskip puts user, process and customer experience first

For an international container transportation company like Samskip, it is important that strategy, systems, processes and data management are connected, while the User Experience (UX) stays the same worldwide. A number of basic principles were defined that all internal processes had to stick to, in the field of automated processing, one touch data, standardization process management and user-friendliness. The system should not only be easy and efficient to use, Samskip also wanted that users would enjoy working with it. That is why we looked at UX from the very beginning of the development stage. In CoolProfs, Samskip found a partner who quickly realized the application, dared to ask critical questions and delivered results: A slick modern, innovative and solid system on which it can continue to grow for years. The new system makes Samskip a technologically advanced player with a leading edge in the international market. ●

Samskip is a worldwide service provider for container transport. The company was using a more than 30 year old administration system. This was in desperate need of replacement. After having done some market research, it was decided to work with the low-code platform of OutSystems with CoolProfs as development partner and Okapion as UX partner.

COOL DATA MOVER | Lifetime for data

Why stage data?

To perform system tests, reproduce production errors, demonstrate new OutSystems applications and train end-users, you need application data in each environment of your deployment pipeline. Unfortunately the 'right' data is often missing in non-production environments. Therefore testers and users often need to enter all data manually over and over again. How can you solve this problem one and for all, while improving the productivity of rapid application development?

Our solution: The new and improved Cool Data Mover

We have developed a unique service to stage application data, our new version has lots of nifty extras. The Cool Data Mover service allows you to easily automate the export and import of data between environments. •

The advantages are:

- Directly connect to the OutSystems meta model
- Easily define application data sets to stage
- Automatically export, delete and import data.

New features:

- Supports Cloud and on premise
- GDPR ready
- Improved filters
- Improved speed

COOLPROFS | Rapid. Development. Partner

CoolProfs is a leading consultancy company focused on the development of customized information systems.

Our approach is fully geared towards the business and spans across the entire life-cycle of information systems. We are an OutSystems Elite Partner and probably have the most OutSystems experience in the Benelux. We train our people to the highest level in both OutSystems and Agile/Scrum. We develop, analyse, transfer knowledge, make life easier for our customers and partners and above all, we are innovative. And we love doing this! We currently have 3 OutSystems MVP's, more than 40 certified developers and years of experience in building innovative applications for leading companies in Europe. •

COOLPROFS

Rapid. Development. Partner.

Rapid. Development. Partner

CoolProfs works for innovative organizations such as Scildon, ING, Rijk Zwaan, RET, Samskip, NS and UTZ. And we do so with a lot of fun! We help our customers develop, analyse their IT infrastructure, use and transfer our knowledge about OutSystems, make the life of our customers and partners easier and above all, we are innovative. And we love doing this!
